## Standard level

### Paper 2

Wednesday 28 October 2020 (afternoon)

Candidate session number

1 hour 15 minutes

|  |  |  |  |  |  |  |  |  |  |  |  |
|--|--|--|--|--|--|--|--|--|--|--|--|
|  |  |  |  |  |  |  |  |  |  |  |  |
|--|--|--|--|--|--|--|--|--|--|--|--|

#### Instructions to candidates

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- Section A: answer all questions.
- Section B: answer one question.
- Answers must be written within the answer boxes provided.
- A calculator is required for this paper.
- The maximum mark for this examination paper is **[50 marks]**.

Question 1 removed for copyright reasons

16EP04

2. A separate study focused on the physiology of muscle fibres. It investigated the effect of post-exercise massage on muscle stiffness over a five-day period after downhill running. Stiffness of four leg muscles (rectus femoris, biceps femoris, tibialis anterior and medial gastrocnemius) was assessed pre-run, immediately post-run, post-massage, and 24, 48, and 72 hours post-massage. For comparison, one leg was massaged and the other received a placebo treatment. (Note: an increase in  $N\ m^{-1}$  value means an increase in muscle stiffness.)

| Stiffness ( $N\ m^{-1}$ ) |                |         |                |         |                   |         |                      |         |
|---------------------------|----------------|---------|----------------|---------|-------------------|---------|----------------------|---------|
|                           | Rectus femoris |         | Biceps femoris |         | Tibialis anterior |         | Medial gastrocnemius |         |
|                           | Massaged       | Placebo | Massaged       | Placebo | Massaged          | Placebo | Massaged             | Placebo |
| Pre-run                   | 275            | 275     | 310            | 305     | 380               | 370     | 280                  | 285     |
| Post-run                  | 270            | 268     | 312            | 312     | 385               | 390     | 287                  | 288     |
| Post-massage              | 275            | 278     | 310            | 312     | 388               | 415     | 282                  | 285     |
| 24 h post-massage         | 285            | 280     | 315            | 320     | 420               | 422     | 300                  | 302     |
| 48 h post-massage         | 282            | 279     | 313            | 312     | 417               | 415     | 298                  | 305     |
| 72 h post-massage         | 280            | 279     | 317            | 320     | 417               | 415     | 300                  | 302     |

- (a) Identify the massaged muscle with the greatest stiffness post-run.

[1]

.....  
.....

- (b) Calculate the difference in stiffness, in  $N\ m^{-1}$ , between massaged muscle and placebo post-massage for the muscle identified in 2(a).

[2]

.....  
.....  
.....  
.....

- (c) Deduce the effect of post-exercise massage on muscle stiffness at 72 hours post-massage.

[1]

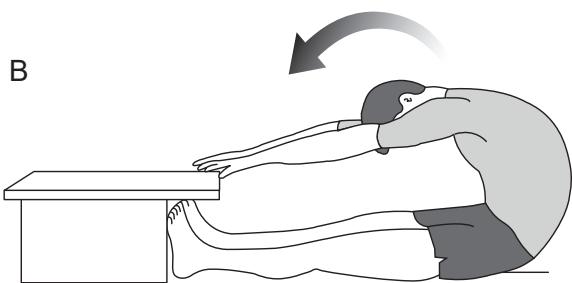

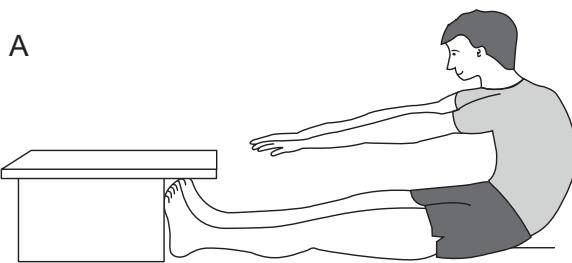

.....  
.....

Turn over

3. The diagram shows a fitness test.

- (a) State the fitness test shown in the diagram.

[1]

.....  
.....

- (b) Identify the movement at the hip on moving from position A to position B.

[1]

.....  
.....

(This question continues on the following page)

16EP06

**(Question 3 continued)**

- (c) Explain the mechanics of inspiration for an athlete completing an aerobic fitness test. [4]

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

4. (a) State the function of platelets in response to a skin cut. [1]

.....  
.....

- (b) Describe the pathway of the electrical impulse during excitation of the heart muscle. [4]

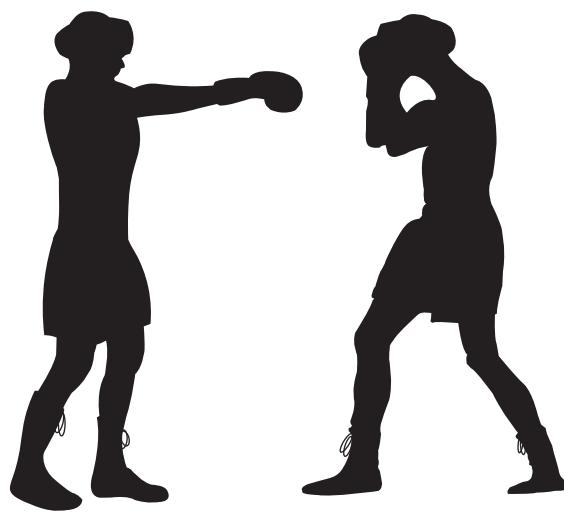

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

.....

16EP08

## Section B

Answer **one** question. Answers must be written within the answer boxes provided.

6. The diagram shows a rower using a rowing machine.

- (a) Analyse the movement at the knee and hip as the rower moves from position A to position B in the diagram. [6]
- (b) Outline **one** type of muscle tissue. [2]
- (c) Describe how the characteristics of slow-twitch muscle fibres are suited to a rower. [4]
- (d) Describe the production of ATP from fatty acids. [4]
- (e) Discuss the increased maximal oxygen consumption of athletes after a period of endurance training. [4]

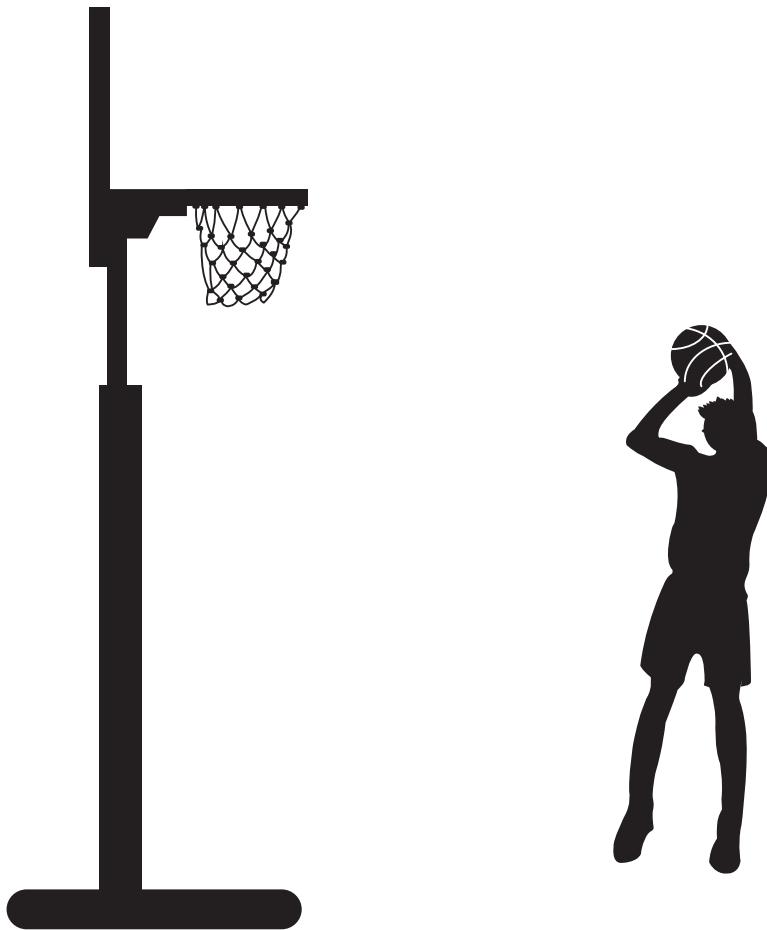

16EP09

Turn over

7. (a) Define Newton's first law of motion. [1]
- (b) Explain how Newton's laws of motion apply in a team sport. [4]
- (c) Describe the function of adrenaline during exercise. [4]
- (d) Discuss the distribution of blood at rest and redistribution of blood during strenuous exercise. [6]
- (e) Using examples, outline the different methods of transfer. [5]

8. The diagram shows a basketball player shooting.

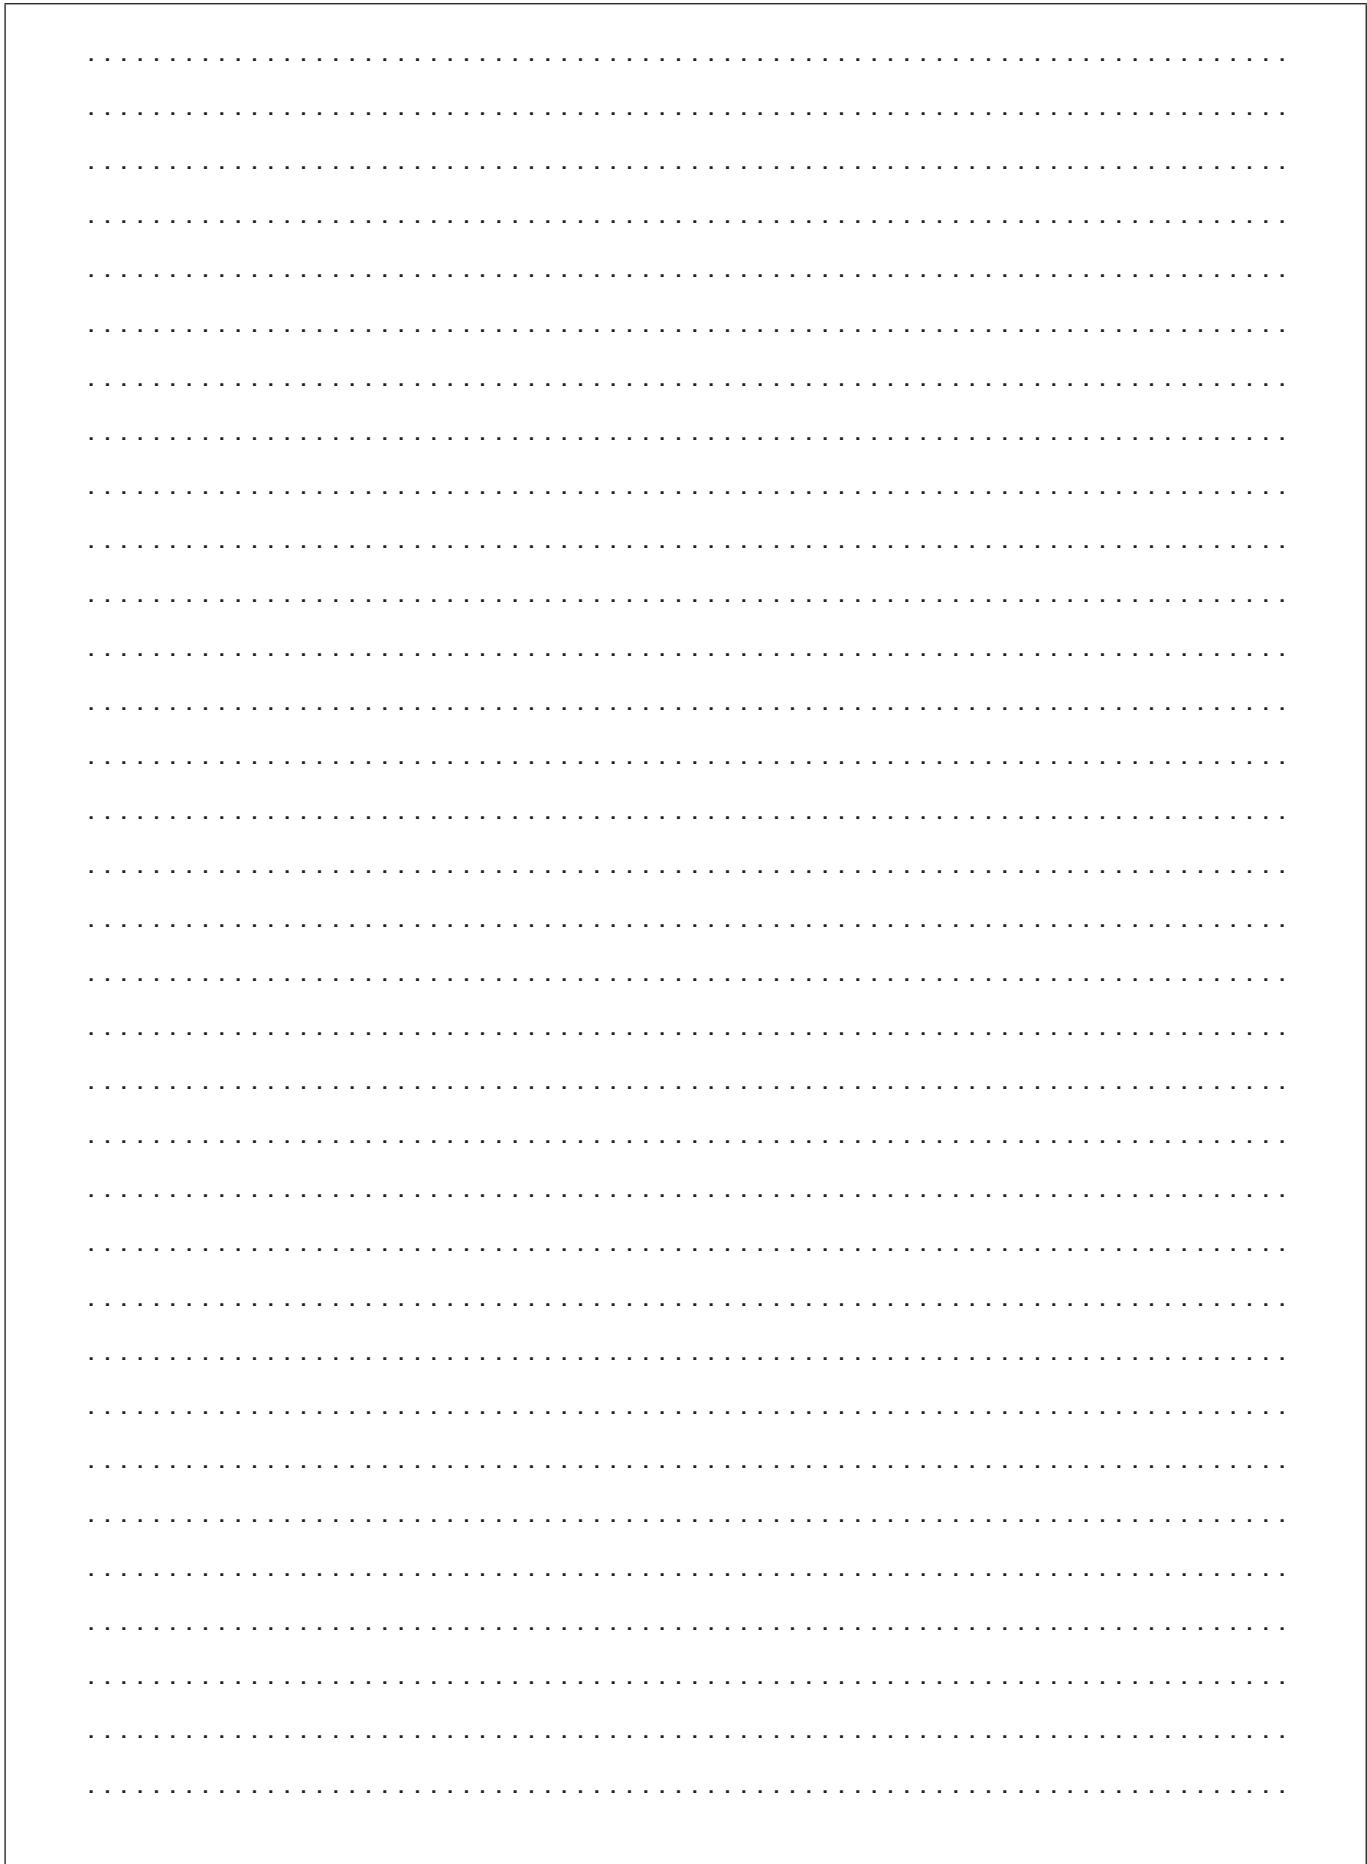

- (a) Distinguish between health-related and performance-related components of fitness. [1]
- (b) Apply **four** components of fitness to the movement of a basketball player. [4]
- (c) Using an example from a team sport, evaluate the concept of the psychological refractory period (PRP). [5]
- (d) Outline **five** features of a synovial joint. [5]
- (e) Explain what happens as an athlete breathes heavily after a basketball match. [5]
